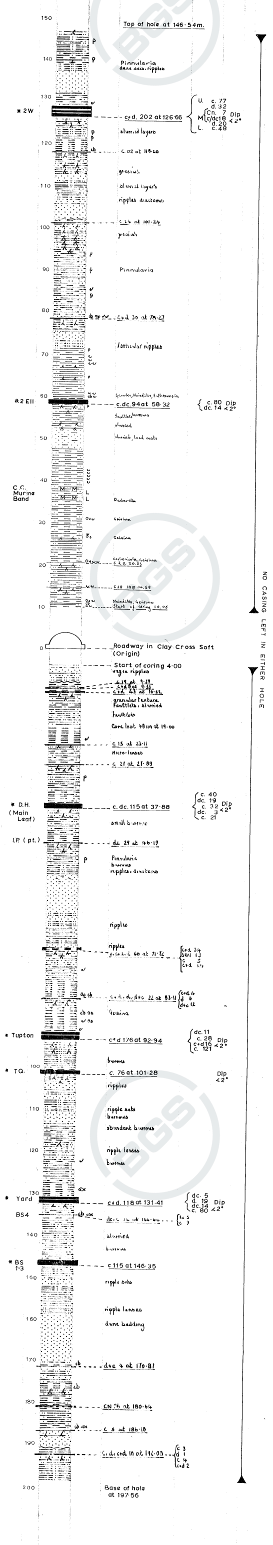
MARKHAM COLLIERY
No.16 (up) and No.17 (down) underground boreholes
(from Clay Cross Soft)

445744 } both
368403 } holes

1980 / 1981

-376·1m. O.D.



Section of: MARKHAM NOS. 16 (UP) AND 17 (DOWN) UNDERGROUND BOREHOLES

Purpose: COAL EXPLORATION

(Nat. Grid, Sheet & Qtr.) B/H REGD. NO.

Exact Site: NATIONAL GRID CO-ORDINATES — SK 46 NE — 55a [redacted] (No.16) 55b [redacted] (No.17)

E445744) Both holes
N368403)

SK 46 NE/44+ 50

Level at which bore commenced relative to O.D. : 376.1 m
(Zero: floor of Clay Cross Soft)

Date of Boring: 1980-81

Borer: NATIONAL COAL BOARD
Cores examined by D.J. Green, N.C.B. Geologist

GEOLOGICAL CLASSIFICATION	NATURE OF STRATA	THICKNESS m	THICKNESS cm	DEPTH m	DEPTH cm
	Top of borehole at			146	54
Siltstone	coarse, vaguely greenish; occasional siltstone medium layers; poorly laminated; rare roots throughout	0	84+	145	70
Siltstone	medium with occasional siltstone coarse layers (strong); common ironstone bands; poorly laminated	0	90	144	80
Siltstone	fine, poorly laminated; common plant debris	0	54	144	26
Siltstone	coarse, unlaminated; rare plant debris	0	61	143	65
Siltstone	medium with occasional siltstone fine and muddy layers, poorly laminated; occasional ironstone bands; rare plant debris	1	50	142	15
Siltstone	fine, poorly laminated; common ironstone nodules; occasional plant debris	0	75	141	40

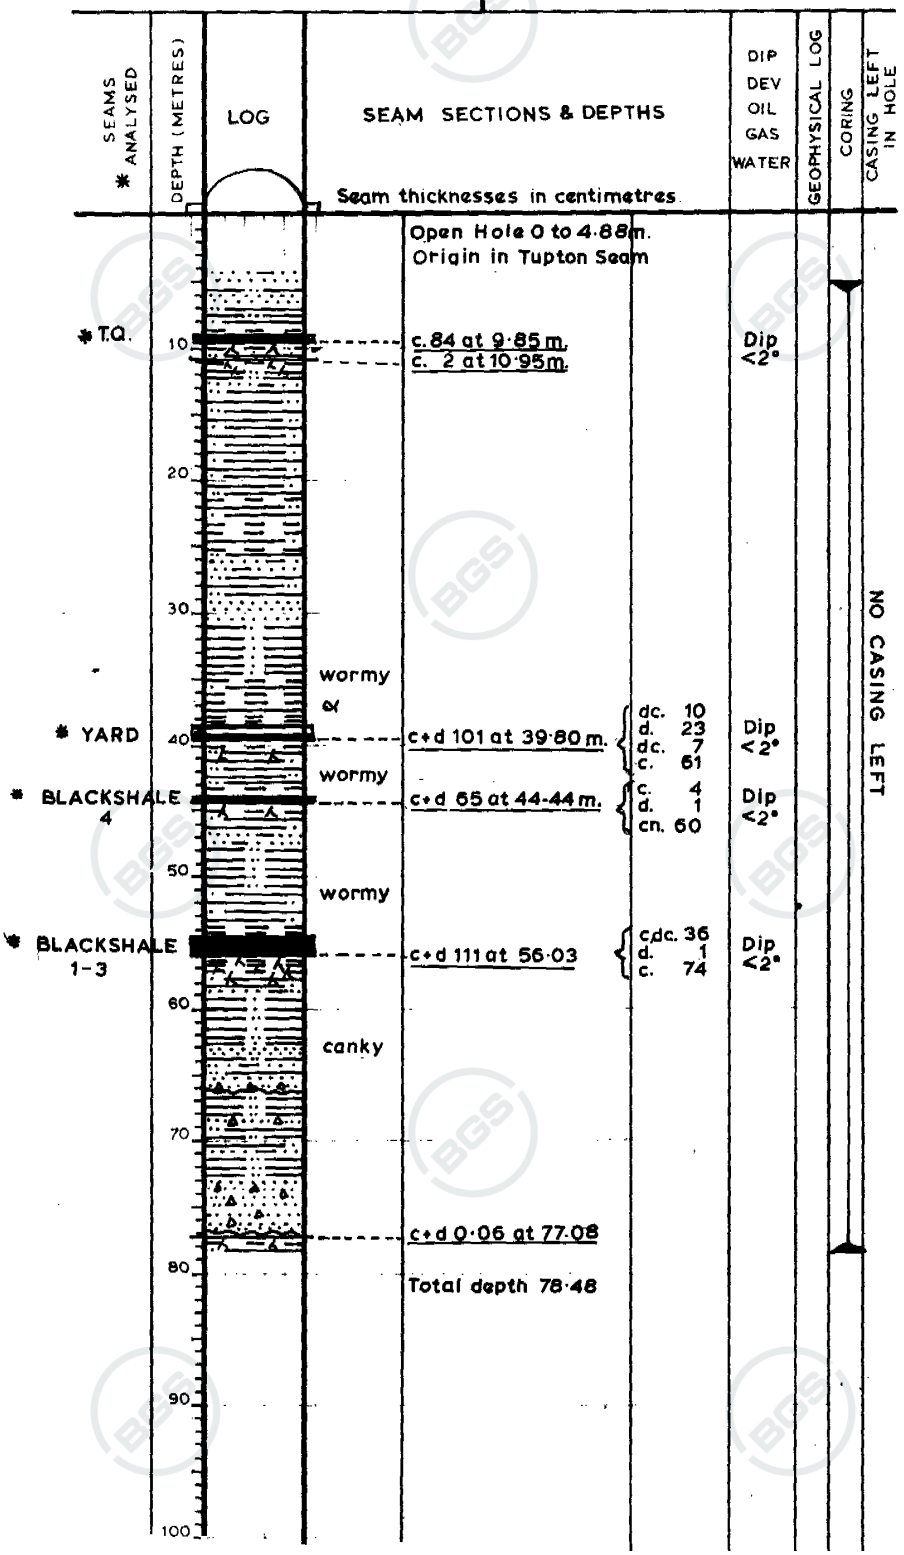
BOLSOVER COLLIERY

No.18 underground borehole (from Tupton)

E 445733
N 369127

DATE 1981
STARTING LEVEL -517·8 m O.D.



Section of: Bolsover Colliery No. 18 Underground Borehole

Purpose: Coal Exploration

SK46NE/47

Nat. Grid, Sheet & Qtr. B/H REGD. NO.

SK46NE 48

Exact Site: National Grid Co-ordinates
E. 445 733
N. 369 127

Level at which bore commenced relative to O.D.:
517.82 m below O.D.
(in Tupton seam workings)

Date of Boring: August 1981

Borer: National Coal Board
Cores examined by P.K. Boam, N.C.B. Geologist

GEOLOGICAL CLASSIFICATION	NATURE OF STRATA	THICKNESS m	THICKNESS cm	DEPTH m	DEPTH cm
	Open hole to 4.57			4	57
Cores not seen		0	31		
				4	88
Sandstone	medium; siltstone fine laminae sharp	0	30+	5	18
Siltstone	medium, rare thin sandy laminae sharp	0	05	5	23
Sandstone	medium, well cemented; micaceous planty planes sharp	0	87	6	10
Siltstone	fine to medium, sandy laminae and lenticular ripples; plant debris on bedding planes, rare sand-filled burrows sharp	1	50	7	60
Siltstone	fine, muddy, locally iron-rich; vaguely wormy	1	19	8	79
	CORE ANALYSED, 8.79 TO 10.29

SURVEY DEPARTMENT

BOREHOLE DATA AND HISTORY

BOREHOLE NAME: BOLSOVER N°18 UNDERGROUND BOREHOLE

Approximate Location: 2,000 METRES SOUTH 5° WEST BOLSOVER SHAFTS.

National Grid Reference: E 445733·03 N. 369127

6 inch sheet: SK 46 NE.

Level of Origin: 517·82 METRES BELOW O.D.

Date of Drilling: Commenced 24.7.81.
Finished 25.8.81.

Contractor's Name: N.C.B.

Name of Boremaster: DRILLER IN CHARGE J. MOTTRAM.

Depth m (ft)	Diameter of Core mm (in)	Diameter of Hole mm (in)
0 To 4.57	OPEN HOLE.	76 mm.
4.57m To 78.45	NQ CORE 47.6 mm	75.8 mm

Drilling Difficulties: NONE.

Method of Sealing Off Borehole: INJECTED 467 Kilograms SHALLOW OIL WELL CEMENT API. Class B MIXED WITH 250 litres FIRE MAIN WATER THROUGH THE DRILL RODS. CHECKED BORE HOLE NEXT DAY, CEMENT SOLID TO FLOOR OF ROADWAY.

Purpose fulfilled by Borehole: OBTAINED CORES OF 3/4, YARD, BLACKSHALE & ASHGATE SEAMS
