.00	57	21	0 21	0		((1.60)	OPEN HOLE			
.60 .20-2.48	27	0	0	0	C1	149.15	1.60	MADE GROUND. Recovered non-intact as orange brown angular to subangular coarse gravel and cobble sized fragments of moderately weak and moderately strong fine to medium grained sandstone. One fragment 320mm long possible boulder. Driller notes sandstone boulders.		***************************************	
00-3.04 00	69	32	0	0	SPT 35°/39		(3.75)			***************************************	
35 50 65			0 0 0	0 0 0		145.40	5.35	Completely weathered SILTSTONE. Recovered as stiff to very stiff (locally very weak) grey thickly laminated extremely closely fissured silt/clay.	XXXXXXX	×	
00	89	89	9	0			(1.70)	From 5.50m to 5.65m; weak grey weathered fine to medium sandstone with occasional very narrow wispy black laminae. Below 6.60; generally very weak with frequent black carbonised plant remains (up to 4mmx30mm).		* * * * * * * * * * * * * * * * * * * *	
05 25-7.35 85	100 91	94	29	0	P5	143.70	7.05	Generally weak (variably very weak to moderately weak) dark grey SILTSTONE (occasionally grading to mudstone). Orange brown discolouration on some fracture surfaces. Fractures, subhorizontal (10 degrees to 30 degrees), closel spaced smooth, planar frequently irregular, others subvertical and vertical, smooth, planar to irregular.	******	× × × ×	
5 5-8.75 0	99	77	0	0	C2	((3.60)	At 8.35m; 65mm rounded ironstone nodule.			
ŏ 5			0	0	P6			From 9.35m to 10.10m; structure generally lost to weathering, recovered as soft to very stiff thickly laminated extremely closely fissured silt/clay with frequent lithorelics of very weak mudstone.	X X X X X X X X X X X X X X X X X X X	× × ×
