	A deep and normally very dry mine, Glapwell has only experienced trouble with water as shallower Seams Top Hard and 1st Waterloo approached the Outorop near the water bearing rock and alluvium of the River Doe Lea. This has been further affected by waterlogged ancient workings of the 6 ft. thick Top Hard Seam mear the Outorop. The working of Lower Seams could be affected if the flood water at Langwith was allowed to rise indefinitely.			
NATIONAL COAL BO	A deep and normally very dry mine, approached the Outorop near the we waterlogged ancient workings of the affected if the flood water at Lan

112 SK 46NE A656 665H 30 A

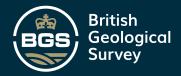

Glapwell Colliery

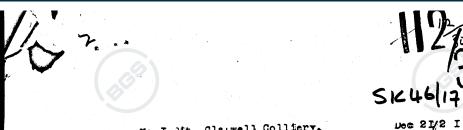

A.

Quantity pumped per 24 hours.
Top Hard 199,000 galls.
1st Waterloo 6,000 "
Analysis given on accompanying sheet.

Information from The Sheetbridge Coal and Iron Co. Ltd., Chesterfield.... October 1945.

Shaft to be abandoned of filled in. 27.7.64

No I Pit. Glapwell Colliery.

Parts per I003000

9.3. 7.0

Calcium Sulphate.... Valcium Chloride.....

Hardness Begrees Clarke...... 41.58 Total Alkilinity...... 42 .00

This water is hard; the high figures for total solida in solution renders it unsuitable for boilers purposes even after treatment.

Information from The Sheepbridge Iron and Coal Co. Ltd., Chesterfield October 1945.

Visited and sited on Derly 31 NW/E.

Pumping 24 hours daily C. 210,000 gpday. Some user in colling, for washing coal, not boilers NCB 101 ava 40. Bolsover no Chesterfield.

00. c 3800.
